I. Conventional Theory of Superconductivity	7
1. BCS Theory	9
Introduction(1)	9
1.1. Hamiltonian H_{BCS}	10
1.2. Superconducting Ground State	14
1.2.1. Cooper Pair	14
1.2.2. BCS Ground State	18
1.2.3. Conclusions at $T = 0$	22
1.3. Excited States of a Superconductor	29
1.3.1. Bogoliubov Transformation of H_{BCS}	29
1.3.2. DOS in the Superconducting State	32
1.3.3. Bogolons	33
1.4. Thermodynamic Properties	35
1.4.1. Gap Equation at $T \neq 0$ from H_{BCS}	35
1.4.2. Mean-Field Approximation: $H_{\text{BCS}}^{\text{MFA}}$, Gauge Symmetry Breaking	38
1.4.3. Transition Temperature T_c	41
1.4.4. Conclusions for $T \neq 0$	43
Appendix A. Electron-Phonon Interaction	49
Appendix B. Schrieffer-Wolff Transformation	53
Appendix C. Bogoliubov Transformation	55
References [1]	59
2. Eliashberg Theory	61
Introduction(2)	61
2.1. Electron-Phonon Hamiltonian	61
2.2. Matsubara Green's Functions	64
2.2.1. Gorkov-Nambu Formalism	64
2.2.2. One-Phonon Green's Function	67
2.3. Electronic Self-Energy	70
2.4. Eliashberg Equations	72
2.4.1. Imaginary-Frequency Representation	72

Contents

2.4.2.	Coulomb Pseudopotential	75
2.4.3.	Eliashberg Equations on Imaginary-Frequency Axis	79
2.4.4.	Real-Frequency Representation	80
2.5.	Superconducting Transition Temperature T_c	84
2.5.1.	Linearized Eliashberg Equations	84
2.5.2.	Weak-Coupling Limit	85
2.5.3.	Strong-Coupling Case, McMillan's T_c -Formula	89
2.5.4.	Electron-Phonon Coupling Parameter λ	94
Appendix D.	Fourier Transformation of the Matsubara GF	97
References [2]	101
3.	Berk-Schrieffer Theory	103
Introduction(3)	103
3.1.	Paramagnons in a Normal-Conducting Metal	103
3.1.1.	Hubbard Model	104
3.1.2.	Magnetic Susceptibility	105
3.1.3.	Lindhard Function	107
3.1.4.	Stoner Enhancement	110
3.2.	Paramagnons and Superconductivity	112
3.2.1.	Berk-Schrieffer Equations	113
3.2.2.	Paramagnon Effect on T_c	116
3.3.	Impurity Effects	118
References [3]	128
II.	Models of High-T_c Superconductivity in Cuprates	129
Experimental Background	131
References [Ex]	138
4.	ODLRO, BEC, η-Pairing	141
Introduction(4)	141
4.1.	Off-Diagonal Long-Range Order	141
4.2.	Bose-Einstein Condensation	144
4.3.	Yang's η -Pairing	147
References [4]	155
5.	Spin-Bag Mechanism	157
Introduction(5)	157
5.1.	Itinerant-Electron Antiferromagnetic Insulator	157
5.2.	Pairing Interaction and Superconductivity	163

Appendix E. DOS for the Tight-Binding Band	171
References [5]	173
6. Resonating Valence Bond (RVB), $t - J$ Model	175
Introduction(6)	175
6.1. Hubbard-Heisenberg type $t - J$ Hamiltonian	176
6.2. Mean-Field Theory of RVB	183
6.3. Hubbard's Projection Operators	195
6.4. Slave-Field Formalism: Holons and Spinons	208
References [6]	223
7. d-p Models	225
Introduction(7)	225
7.1. Emery Model	226
7.2. Derivation of a O(p) Hole - Cu(d) Spin Hamiltonian	229
7.3. Anderson Lattice Model	238
7.4. MFA for the $\tilde{t}_{pp} - \mathbf{J}_{pd} - \mathbf{J}_{dd}$ Model	249
References [7]	258
